

HISTORY 101 - THE SPACE RACE

Keywords/Milestones

- August 1991
- 553 Humans (60Woman)
- 15 international agencies
- 62 Billion\$
- Born at the first anatomic one
- After this the cold war is born and the USA and the Russia are in war
- Start by the development of the ballistic rocket how can fly in the atmosphere
- October 4 1957 start the first satellite
- The USA are very stranger
- A war start (The space race) into the USA and the Soviet
 - The goal launch an human in the space before the soviet
- The first test are in the animals
- In 1959, NASA find 7 pilots (Mercury 7).
- 1963 the first man in the space during 108 minutes by the USSR
- After this start project Apollo who the goal it's to go to the lune
- 1967 January, first test of launch
- August 1968 NASA annonce the start of the launch (Apollo 8) of the first rocket at the end of 1968.
 - After 3 days in orbit the rocket and man into arrived into the luna orbit
 - Apollo 8 is the first mission good and arrive with success
- 7 month later (July 20, 1969) Neil amonstrong arrive into the moon and the America are the first into the moon
- This spectacular is see by more than 500 million person.
- With this the russia stop the race to the moon and the space
- After this an collaboration start between USA and Russia to create the ISS
- 5 different nation work on this

Summary - The Space Race

The Space Race start at the first anatomic one, new war are start between the USA and the Russia.

After this the war are declared and the space race begin. To start is and object who send in the space. It's by the USSR and It's a satellite whose scale is a scale of a normal human. With this the USA are very scare by the USSR send a nuke to the USA by the space.

Now the race is concentrated to send an human in the space. To this the test is going by animals (*dog/cat/...*). Once it's USSR whose win this in 1963 who send the first human in the space during 108 minutes.

After those defeat the USA launch the race of the moon with the Apollo project. The first test are un 1967 but is none because the rocket explode. In august 1968 the NASA announce the Apollo 8 and the launch in the end of 1968 year. The goal of this rocket is to go at the moon turn around and return on the earth. Apollo 8 is the first rocket with human to go to the moon, after 3 days in orbit the rocket is next the moon orbit, turn around and return on the earth with photo, and more.

7 month later, in July 1969 Neil Armstrong is the first man to go on the moon. This is see by more than 500 millions persons.

After this announcement by the USA the USSR stop the race and the war and start a collaboration with the USA to create a new space station (The ISS). Finally is 5 nation different more than Billion \$ used and a lot a human to go on the space.
